

RIVERDALE AQUAMESH COATED WIRE - MADE IN USA

1" x 2" 14 GAUGE VINYL COATED GALV. MARINE MESH

Vinyl-clad **MARINE MESH** is a family of plastic coated steel wire fabrics specifically designed to combine the high structural strength of steel wire and the outstanding durability of a high molecular weight polyvinyl chloride plastic. In the extremely demanding marine environment Vinyl-Clad works with you, not against you. In either fresh or salt water, Vinyl-Clad shrugs off conditions which would quickly destroy other materials. As long as the coating remains undamaged, the mesh will last indefinitely. It's easily formed into virtually any shape from a lobster trap to a fish trap. Vinyl-Clad **Marine Mesh** is lightweight and resists punishing abuse. The tough vinyl coating permanently bonded to the steel has high tensile strength and elongation, excellent impact resistance and flexibility. It is totally unaffected by temperatures as low as 30° F, and as high as 150° F. Strong galvanized after welded wire netting encased in a "Super-Tuff" vinyl coating.
